AEL’s industrial product series is supplied into South African, African and selected international markets. With direct access to AEL’s large team of leading engineers and scientists, the industrial products division is able to offer a broader series of highly versatile industrial solutions, which perform well against strict quality parameters. Innovations such as curing before bagging, allow for the enhanced structural integrity of the porous prill which ensures its superior performance from the point of production to where the product is used down the hole.

Our products include solid and liquid Ammonium Nitrate (AN), nitric acid, 25 % ammonia solution as well as anhydrous ammonia, all of which are conveniently sourced from AEL’s industrial hub in Gauteng. Our industrial products are known for their consistency with regards to quality standards and are supported by a highly skilled technical team.

The reliable supply of high quality industrial products forms an integral part to any mining or chemical process operation. AEL’s policy is to provide to explosives divisions first.

Ammonium Nitrate
TECHNICAL GRADE (TGAN)

This is essentially ammonium nitrate (NH4NO3) presented in the form of coarse, porous, hardened spherical particles. The material is treated with internal additives for hardening and an external anti-caking agent.

TECHNICAL SPECIFICATIONS

The material is presented in the form of free-flowing, white to cream-coloured, spherical particles. The product is free from grit, visible impurities and foreign matter.

BENEFITS

- Reduced caking and improved flowability minimises waste

- Superior fuel absorption improves blast performance by facilitating an optimal oxygen balance through the addition of fuel

- Storage and handling benefits of prill [longer shelf life, ease of handling]

- Consistent product quality improves handling and bore-hole loading rates

- Reduced dust and fines during handling, minimises health and environmental concerns

- The tight controls on product density and uniformity of particle size maximise in-process controls

FEATURES

- Topan™ prilling process

- Prill curing

- Superior hard and strong prill with reduced friability and moisture content

- High porosity

- Various packaging sizes

APPLICATION

- Pumped Emulsions

- Bulk ANFO explosives

- Heavy ANFO’s

SPECIAL PRECAUTIONS

TGAN is moderately toxic and may decompose at high temperatures and may explode under certain conditions. Avoid confinement. Under extreme conditions an explosion may occur.

PACKAGING

Technical Grade (TGAN)

| Bags (Packed in robust woven polypropylene bags with inner polyethylene liners to minimise moisture ingress. All bags have UN certification & conform to international requirements) | 25 kg |
| 1,000 kg (containerised for exports) | |
| 1,200 kg | |

Bulk

- Bulk tanker
- Rapid Reloading System (RRS)

Transport (UN Classification)
Class 5.1D, UN no. 1942, Oxidising agent
Ammonium Nitrate

EMULSION GRADE (HDAN)

HDAN comprises dense ammonium nitrate particles obtained by spray-drying ammonium nitrate solution. Once dissolved the solution can be used to manufacture base emulsion or used for other chemical processes.

TECHNICAL SPECIFICATIONS

The material is presented in the form of glossy white spherical particles and does not contain any visible impurities or foreign matter.

BENEFITS

- Reduced caking and improved flowability
- The material remains reasonably free flowing after transportation and storage
- No flocculation required after melting, prior to emulsion manufacture

FEATURES

- Superior hard prill with reduced friability and moisture characteristics
- High packing density

APPLICATION

Manufacture of base emulsion and use in chemical processes.

SPECIAL PRECAUTIONS

HDAN is moderately toxic and may decompose at high temperatures. Avoid confinement. Under extreme conditions an explosion may occur.

PACKAGING

EMULSION GRADE (HDAN)

Bags (Packed in robust woven polypropylene bags with inner polyethylene liners to minimise moisture ingress. All bags have UN certification & conform to international requirements)

1050 kg
1,200 kg
(exported for exports)

Transport (UN Classification)
Class 5.1D, UN no. 1942, Oxidising agent
Ammonium Nitrate Solution (ANS)

This is a hot concentrated 88 % solution of ammonium nitrate (NH₄NO₃) used in the manufacture of base emulsion or can be used in other chemical processes (diluted or otherwise).

TECHNICAL SPECIFICATIONS

A concentrated 88 % solution of ammonium nitrate (NH₄NO₃).

BENEFITS

- Consistent concentration and purity provides consistent process control and end product quality
- Convenient temperature range for transportation over long distances

FEATURES

- Strict process control resulting in superior pH and purity

APPLICATION

- Manufacture of base emulsion
- Fertiliser raw material
- Other chemical processes

SPECIAL PRECAUTIONS

ANS may become explosive when the concentration increases due to water evaporation under elevated temperature conditions. It is critically important to use equipment which meets engineering requirements. Such compliance minimises explosion risk since the transfer of Ammonium Nitrate Solution (ANS) by mechanical means is hazardous and can lead to an explosion if not properly performed.

Furthermore, it is important to keep the material in solution at a pH of greater than 2 since a low pH can lead to fume-off of NOX gasses, which may lead to an explosion.

PACKAGING

Bulk Tanker—approximately 30 tonnes

Transport (UN Classification)

Class 5.1 UN No 2426 Elevated temperature OXIDISING AGENT
INDUSTRIAL PRODUCTS

Nitric Acid

This is a 60 % solution of nitric acid (HNO₃) in the form of a clear colourless to pale yellow, fuming, corrosive liquid with a pungent odour. It is used mainly in the production of ANS and in chemical processes.

TECHNICAL SPECIFICATIONS

The material is a clear, colourless to pale yellow, fuming liquid, free from visible impurities and sediments. A chemically pure form is also available.

BENEFITS

- Consistent product quality
- A chemically pure nitric acid is available for some chemical processes

FEATURES

- Clarity of solution with low impurities
- Demineralised water used in the production process

APPLICATION

Manufacture of ammonium nitrate products and other industrial chemicals

SPECIAL PRECAUTIONS

- Full protective clothing and a face shield should be worn when handling Nitric Acid
- It is highly corrosive and attacks most metals vigorously
- It is also a powerful oxidising agent that can react violently with organic substances

PACKAGING

Bulk road tankers

Transport (UN Classification)
Class 8, UN No 2031 (60 %); Corrosive Material OXIDISING AGENT
Aqueous Ammonia

This is an aqueous solution of ammonia (ammonium hydroxide, NH₄OH) in the form of a clear, colourless to slightly yellowish liquid with a pungent, suffocating odour.

**TECHNICAL SPECIFICATIONS**

- Concentration of solution not less than 25 % and with a density of not more than 0.907 g/cm³
- Meets SANS 52122:2007 requirements

**APPLICATION**

- Liquid fertiliser
- Manufacture of industrial and fine chemicals
- Metal recovery processes
- Neutralising agent for acids
- Water purification

**SPECIAL PRECAUTIONS**

- Avoid ingestion, inhalation, contact with the skin and eyes
- Wear full protective clothing when handling the material and ensure adequate ventilation
- Avoid sources of ignition and heat
- Care must be exercised when opening the valves

**PACKAGING**

Bulk Road Tankers

**Transport (UN Classification)**

Hazchem Code: 2P, UN No. 2672, Packing Group III, IMDG Class 8, Shipping name AMMONIA SOLUTION (10-35 % ammonia)

**BENEFITS**

- Manufacturing facility conveniently situated in the industrial hub of Gauteng, South Africa
- Consistent product quality
- Complies with the requirements of FEMA GRAS (Flavour and Extract Manufacturers Association, Generally Recognised as Safe list)
- Complies with SANS 51122:2007

**FEATURES**

- Demineralised water used in the production process
- Consistent product quality
- Easy to handle and store

**SAFETY HANDLING**

- Avoid contact with skin/eyes
- Do not inhale vapour
- Avoid ingestion
Ammonia 100-I, Ammonia 100-R

Anhydrous ammonia \((\text{NH}_3)\) is a colourless gas or when stored under pressure, is a clear water-white liquid. Both forms have a sharp suffocating or intensely irritating odour. Ammonia 100-I is industrial grade and Ammonia 100-R is refrigerant grade.

**TECHNICAL SPECIFICATIONS**
- **Purity:** c.a. 100 percent
- **Boiling Point at atmospheric pressure:** -33.5 °C
- **Density:** 0.61 g/cm\(^3\) at 20 °C
- **Refrigerant Grade.** Contaminants are water, less than 0.05 % m/m and oil, less than 0.001 % m/m.

**APPLICATION**
- Ammonia 100-I
  - Manufacture of Nitric Acid
  - Manufacture of ANS
  - Manufacture of other chemicals
- Ammonia 100-R
  - Refrigeration liquid

**SAFETY HANDLING**
- Avoid contact with skin/eyes
- Do not inhale vapour
- Avoid ingestion

**SPECIAL PRECAUTIONS**
- Engineering standards must be met for storage and handling to ensure that ammonia is not released into the atmosphere
- The boiling point at atmospheric pressure is -33.34 °C, at which the product evaporates—take care during handling!
- Avoid sources of ignition and heat
- Care must be exercised when opening the valves
- Do not confine without adequate vapour space or pressure relief valve with discharge piped to a safe place

**PACKAGING**
Sold in bulk tankers or ISO Containers

**Transport (UN Classification)**
Hazchem Code: 2PE, UN No. 1005-IMDG Class: 2(2.3), Shipping Name: AMMONIA, ANHYDROUS, LIQUEFIED
